

Data migration is not a one-time event but an ongoing process that may require periodic updates and maintenance. As organisations continue to generate and collect data, they may need to migrate additional data or update existing data within the ERP system. Establishing robust data governance policies and procedures is crucial to ensuring data integrity and consistency throughout the ERP system's lifecycle.

Data Migration is not a one-time process

Data Migration is an ongoing process

Furthermore, data migration efforts should align with the organisation's broader data management and integration strategies. In today's digital landscape, organisations often need to integrate their ERP systems with various other applications and systems, such as **Customer Relationship Management (CRM)**, **Supply Chain Management (SCM)**, and **Business Intelligence (BI)** tools.

Effective data integration ensures seamless data flow and synchronisation across these systems, enabling organisations to leverage their data assets for improved decision-making and operational efficiency.
