

To overcome resistance, consultants and project teams must proactively address these concerns and involve stakeholders throughout the implementation process. This can be achieved through the following strategies:

Communication and Transparency

Open and transparent communication is key to building trust and addressing concerns. Regular updates, town hall meetings, and employee feedback opportunities can help alleviate fears and foster a sense of ownership` in the ERP implementation.

Change Ambassadors

Identifying influential individuals within the organisation who can champion the ERP implementation can be highly effective. These change ambassadors can help promote the new system's benefits, address concerns, and serve as a bridge between the project team and the rest of the organisation.

Training and Support

Comprehensive training and support programs help employees understand the new system, its functionalities, and how it will impact their roles and responsibilities. Hands-on training, simulations, and readily available support resources can increase user confidence and reduce resistance.

Incentives and Recognition

Recognising and rewarding individuals or teams who embrace the change and contribute to the successful implementation of the ERP system can promote positive behaviour and reinforce the desired outcomes.

Leadership Commitment

Strong leadership commitment and active involvement from top management are crucial for driving organisational change. Leaders who visibly support the ERP implementation and lead by example can help overcome resistance and reinforce the initiative's importance.
