

Establishing AI Ethics Boards and Governance Frameworks

Consulting firms should consider establishing dedicated AI ethics boards or committees to provide oversight and guidance on AI technologies’ ethical development and deployment. These boards should be composed of diverse experts, including:

The primary responsibilities of an AI ethics board may include:

Developing and maintaining a clear set of ethical principles and guidelines for the firm’s AI-driven consulting practices.

Reviewing and providing guidance on the ethical implications of proposed AI solutions and use cases.

Monitoring and assessing deployed AI systems’ potential ethical risks and impacts.

Advising on ethical dilemmas and providing recommendations for resolving conflicts or mitigating potential harm.

Promoting ethical awareness and training programs for consultants and other personnel involved in AI-driven engagements.
