Venture capital investment in this domain has skyrocketed by **425%** between 2020 and 2022, further fueling the rapid pace of innovation.

As organisations across industries recognise the transformative potential of generative AI, they are actively investing in research and development, forging strategic partnerships and alliances, conducting ideation workshops, and establishing proofs-of-concept (PoCs) to assess the feasibility and impact of this technology.

Forward-thinking organisations are racing to gain a first-mover advantage, integrating generative AI into various aspects of their operations, spanning the front, middle, and back-office functions. Early adopters have already realised the benefits of generative AI, with visible disruptions emerging across industries.
