

Mitsubishi Electric

Our Stories —>

AI-Driven Process Automation and Optimisation Mitsubishi Electric, a global electronics and manufacturing company, recognised the need to optimise its production processes and improve operational efficiency. In collaboration with a consulting firm specialising in AI and process automation, Mitsubishi Electric implemented an AI-powered solution to automate and optimise various aspects of its manufacturing operations.

The AI system leveraged machine learning algorithms and real-time data from sensors and production equipment to identify:

Bottlenecks

Predict maintenance needs

Optimise resource allocation

It also automated various manual processes, such as quality inspections and inventory management, reducing the need for human intervention and minimising the risk of errors.
