

McKinsey 7-S Framework

This widely used framework examines seven interdependent elements of an organisation: Strategy, Structure, Systems, Shared Values, Skills, Style, and Staff. It enables a comprehensive analysis of organisational alignment and change management requirements.

1 Strategy

This refers to the overarching game plan devised by an organisation to achieve its vision, mission, and objectives. An effective strategy clearly articulates where the company is headed, what markets/products to focus on, and how it aims to gain a competitive advantage. As consultants, we assess whether the current strategy is well-defined, communicated, understood, and translated into actionable organisational goals.

2 Structure

The structural element examines how the company is organised in terms of reporting hierarchies, divisions, business units, geographical spread, etc. We analyse if the structural design enables or inhibits the effective execution of the strategy. Misalignments like silos, bureaucracy, or lack of clarity in roles/responsibilities are identified.

3 Systems

These encompass the core processes, procedures, workflows, and systems (IT or otherwise) that operationalise the strategic intent. We evaluate the degree of customisation, integration, efficiency, and control mechanisms in place. Inefficient or disconnected systems can severely hamper strategy implementation.
