Step 4: Gather and Analyse Data

With the framework, it's time to collect and analyse relevant data. This process should be guided by the framework's structure, ensuring you're gathering the correct information to address each component effectively. Leverage various data collection methods, such as:

- ⊕ Interviews
- ⊕ Surveys
- ⊕ Site visits
- ⊕ Document analysis to comprehensively understand the situation
- ⊕ Interviews

For example, suppose you use the McKinsey 7-S Framework to assess an organisation's readiness for change. In that case, you might conduct employee surveys to gauge their skills and shared values, review organisational policies and procedures to understand the systems in place and observe leadership behaviours to assess the managerial style.

It's essential to approach data collection with an open mind and a willingness to challenge assumptions. Sometimes, the information you uncover may contradict your initial hypotheses or reveal unexpected insights, requiring you to adjust your approach or modify the framework accordingly.
