

A consultant deals with a lot of data both qualitative and quantitative. And deriving meaningful insights from this data is the hallmark of any consultant. But before deriving the insights, the data needs to be sliced and diced to arrive at a presentable insight.

While there are multiple open source platforms for this but excel continues to be the favourite among the consultants because of its ease of use and rich functionality. In fact, an average consultant only uses **2%** of the features provided by excel.

Consultant use 2% of features in excel

A good grasp of using these mathematical functions, understanding their syntax, and applying them appropriately in formulae is a must-have skill.
