Global Equities Momentum (GEM) is a rule-based approach using relative and absolute momentum applied to the following indices: Standard & Poor's 500, MSCI All Country World ex-US (MSCI World ex-US prior to 1988) and Barclays Capital U.S. Aggregate Bond. GEM is reconstituted monthly. You cannot invest directly in GEM. Performance does not represent actual fund or portfolio performance. All performance represents total returns and includes reinvestment of interest and dividends but does not reflect possible management fees, transaction costs, taxes, or other expenses. Historical data and analysis should not be taken as an indication or guarantee of any future performance.
