

in a round-trip excursion lasting about 2 weeks. For other chart pattern types, the round-trip is quicker, about 11 or 12 days, peaking after about half that.

Usually if a throwback or pullback occurs, performance suffers. With islands, the performance varies, and it's tiny or nonexistent anyway. In other words, you may not see a difference in performance.

After a throwback or pullback completes, price resumes the breakout direction only about half the time (the exception: 62% of the time for island bottoms in bull markets).

[**Table 45.5**](#) shows pattern size statistics.
