

Description	Explanation
Reversal or continuation	A three-part phrase: term, bullish/bearish, reversal/continuation. <i>Term</i> (short, intermediate, long) is set by the number of days to the ultimate high or low. <i>Bullish</i> for upward breakouts, <i>bearish</i> for downward ones. <i>Reversal/continuation</i> depends on which happens more often.
Performance rank	A numerical rank of the average rise or decline from the breakout to the ultimate high or low, respectively, when compared to other patterns on the associated time scale (daily, weekly).
Breakeven failure rate	A percentage of how often price fails to rise (upward breakouts) or decline (downward breakouts) more than 5% on the way to the ultimate high or low, respectively.
Average rise/decline	A percentage calculated from the breakout price to the ultimate high (upward breakouts) or low (downward breakouts).
Volume trend	The slope of the line found using linear regression to determine the volume trend from the start of the pattern to its end.
Throwbacks/pullbacks	A percentage telling how often a throwback or pullback happens after the breakout.
Percentage meeting price target	Tells how often price reaches the full height measure rule target.
