

How can you tell if price will gap higher? I've no idea. However, I measured performance from the opening price the day *after* the gap to the ultimate high. So if you see a gap, you can buy into the situation and maybe score extra performance points for doing so.

[**Table 7.5**](#) shows how the sizes of big Ws perform.

Height. Tall big Ws perform better than do short ones. To use this finding, measure the height of the big W from the peak between the two bottoms to the lower of the two bottoms. Divide the result by the breakout price (the price of the peak between the two bottoms). If the result is bigger than that shown in the table, then you have a tall pattern.

[**Table 7.5**](#) Size Statistics

Description	Bull Market	Bear Market
Tall pattern performance	48%	31%
Short pattern performance	44%	29%
Median height as a percentage of breakout price	11.9%	16.2%
Narrow pattern performance	45%	30%
Wide pattern performance	47%	30%
Median width	23 days	21 days
Short and narrow performance	44%	30%
Short and wide performance	44%	26%
Tall and wide performance	49%	32%
Tall and narrow performance	48%	29%
