

Table 30.8 Performance and Failures Over Time for Bull Markets

Description	Down Breakout
1990s	−17%
2000s	−14%
2010s	−14%
Performance (above), Failures (below)	
1990s	16%
2000s	21%
2010s	27%

Table 30.9 Busted Patterns

Description	Down Breakout
Busted patterns count	488 or 44%
Single bust count	268 or 55%
Double bust count	24 or 5%
Triple+ bust count	196 or 40%
Performance for all busted patterns	22%
Single busted performance	37%
Non-busted performance (Adam & Adam double bottom)	39%

Busted occurrence. I sorted the patterns by how many busts they showed. Single busts came in first place, but triple (or more) busts came in second. That may sound odd, and it is, but other chart patterns show a similar trend.

Busted and non-busted performance. I used Adam & Adam double *bottoms* as the proxy for a non-busted double top (that is, one with an upward breakout—there's no such a thing, hence the substitute). This instance is one of the few cases where the non-busted double bottom beats all combinations (single, double, and triple+) *and* single busted patterns. It suggests that you'd do better trading bullish chart patterns, not bearish busted ones.
