

complex head-and-shoulders bottoms. The regular head-and-shoulders tend to have steeper necklines than the complex variety. [Figure 40.1](#) also shows a horizontal neckline.

In [Figure 40.2](#), the breakout in mid-November quickly throws back to the neckline and price moves lower for a week or two. This is not a good example of a throwback because price didn't rise far enough to show whitespace between the stock and the neckline. [Figure 40.1](#) shows a better example of a throwback where price lifts off, curls around, and returns to the neckline, leaving behind a white hole inside the looping price movement.

[Figure 40.2](#) A dual-head reversal. Volume on the left side of the pattern is higher than on the right.

In [Figure 40.2](#), by late March the stock reached a high of 16.63, well above the head low of 9.19. Volume on the left side of the chart pattern is heavier than on the right. In this regard, the pattern is more typical than that shown in [Figure 40.1](#).
