

(highest interest rate first, lowest interest rate last). Each month, pay the minimum balance on all credit cards except the one with the highest interest rate. Pay as much as you possibly can on this card each month until it's paid off. Use all available money for this payment including overtime pay, tax refunds, bonuses, and money generated by reducing expenses.

Then start in on the next debt with the highest interest rate. Pay as much as you possibly can each month, including the amount you were previously applying to debt number one. Continue to pay the minimum balance on the others. Keep moving down the list of debts until they're all paid off. This is the only time you should ever pay the minimum balance on any credit card. The credit crunch method requires month after month of consistency and discipline, but it works.
