

watch comedy clips online. Hang out with your goofy friends. Stick duct tape on the bottom of your cat's paws and giggle at his antics. Whatever it takes. Laughter is infectious, and it is gorgeous.

4. Get some sun

No, I'm not talking about baking on the beach, because I'm an advocate of avoiding skin cancer whenever possible. Just 15 minutes in the sun every day can help your body produce more vitamin D than inhaling any amount of vitamin D supplements. Many people in the U.S. suffer from vitamin D deficiency, which causes bone loss and cancer. If you are worried about wrinkles and sun spots on your cheeks, put sunblock on your face and hands, but let the rest of your body soak up some nutritious sun.

5. Drink wine

Assuming you're not allergic to alcohol or prone to rosacea, having a glass of wine not only gives your cheeks a healthy glow, but can give you a good dose of resveratrol, a type of polyphenol with antioxidant properties. The alcohol is good for your heart, too (we're talking light to moderate drinking, of course). Sure, I might be

looking for an excuse to have a glass of champagne with lunch, but as long as I'm not driving around or performing open-heart surgery after a lunchtime aperitif, what's the harm?

6. Stay hydrated

I don't believe in drinking great quantities of water if you don't want to, and it's probably not necessary to take in the eight daily glasses that were randomly recommended to the general public for no reason. But drinking water helps keep your kidneys happy, your skin cleansed (again, the sweating helps here) and plumped, and the toxins flushed out of your system.

7. Go easy on the medication

It can be so easy these days to pop a pill for every little ache and pain, or to take meds when conditions start to trend in the wrong direction. Sometimes, though, doctors seem too busy to deal with the source of your problems and are more than happy to push a prescription across the counter at you. A couple of years ago, I counted the number of daily medications that I was taking, and they numbered eight, five of which were either unnecessary, redundant, or causing *more* problems that required other medications to combat. Overnight, I switched from a
