

brokers and fund operators, to audit the traders, to monitor the manipulators, to halt the frauds, and to root out the illegal boiler rooms, as the futures industry had grown tenfold. Meanwhile, the CFTC continued to review a long list of applications for new futures and options, to determine the economic purpose in each instance.

When I got to see Mr. Memoli, the staff economist, he said he couldn't remember the agency ever disapproving a contract.

In the future, then, we're likely to see a lot more futures. The NASDAQ-100 futures, the S&P OTC individual index, the U.S. dollar index, cocoa options, orange juice options, European currency unit options, yen options, three-month Treasury-bill options, copper options, and long-term municipal-bond-index options are already approved. Upcoming are Treasury repos, Treasury strips, the Eurobond index, an information processing index, the petroleum index, the S&P high-tech index, utility index, *Financial Times* stock exchange 100-share index, utility stock index, Japanese stock index, Comex stock index, Canadian market index, PSE technology index, and the NYSE beta index, plus the housing-start future, the retail-new-car-sales future, the five-year U.S. Treasury index, the earnings index, future-price index, and high-fructose corn index. I got this list from Mr. Memoli.

There's also an ocean-freight future. Maybe soon they'll have futures on rainfall, the Democratic primaries, the Nielsen ratings, and hospital occupancy as well.
