

Finally, $\$720.50 \times .618$, $\frac{5}{8}$ and $\frac{2}{3} = \$445$, $\$450$ and $\$480$, a perfect range for the peak of wave (E). All these relationships are shown in Figure 17-10.

Figure 17-10

An Academic Exercise

Given all the specific and extreme forecasts in this book, perhaps it would be humorous to say that I am going out on a limb here, but would it not make a mathematically beautiful pattern if within wave Y, wave (A) were to bottom near \$182 and wave (C) near \$112? In that way, all the Cycle degree lows of the bear market
