

channel that resulted from connecting the highs of wave I and III, and then the lows of waves II and IV, was exactly parallel, a common characteristic of impulses.

The simple label “wave IV” implied that wave V, a great multi-year bull market of Cycle degree, lay dead ahead. Has *this* expectation been fulfilled? Figure 2-5 shows the same chart updated. As you can see, our late 1970s interpretation has proved correct in forecasting a great bull market. This rise, moreover, does appear to serve appropriately as the *fifth* wave of a five-wave formation of Supercycle degree from 1932 to the present. Now let’s examine *this* structure, the great bull market forecasted in *Elliott Wave Principle*, in greater detail.
