Absenteeism Calculation

Absenteeism calculation is done for a period of time. **It can be a day, week, month or a year.** The formula is:

$$\text{Absenteeism} = \left(\frac{\text{Missed People days}}{\text{Total People days}} \right) \times 100\%$$

If you have 100 people and 20 people are absent on a day,

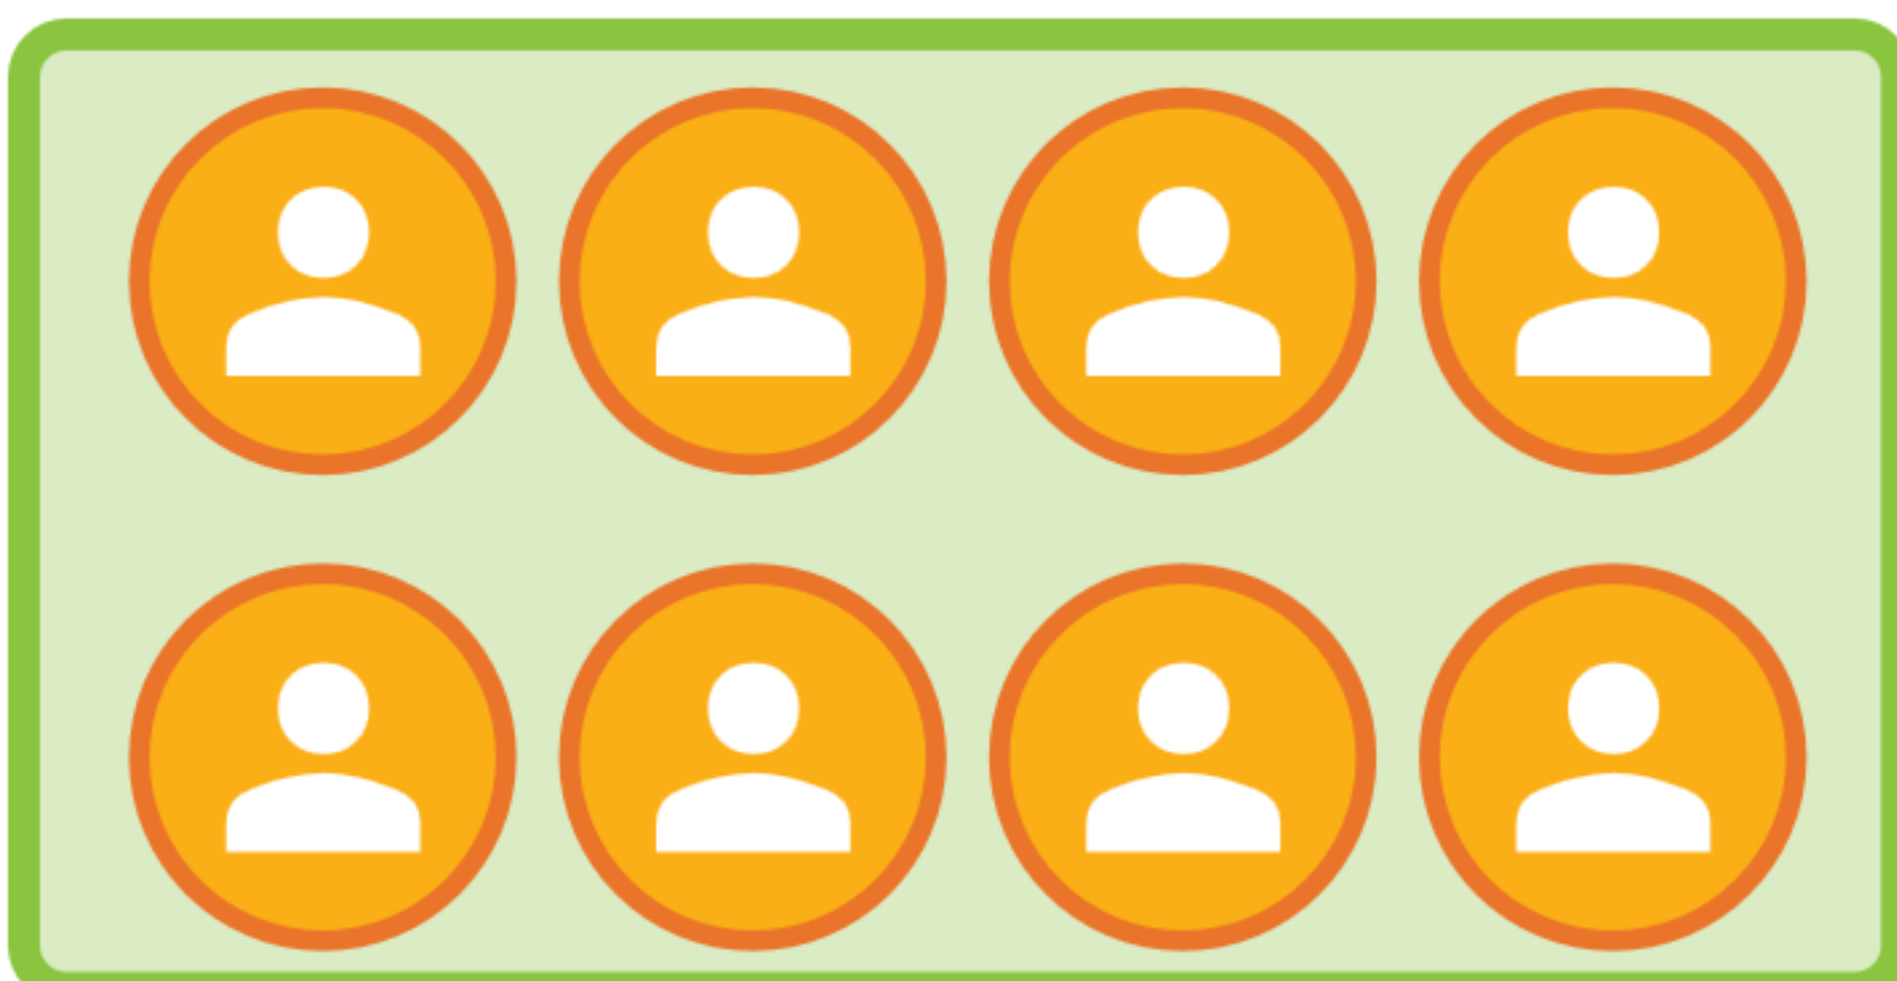

Total people days
= 100 people x 1 day
= 100

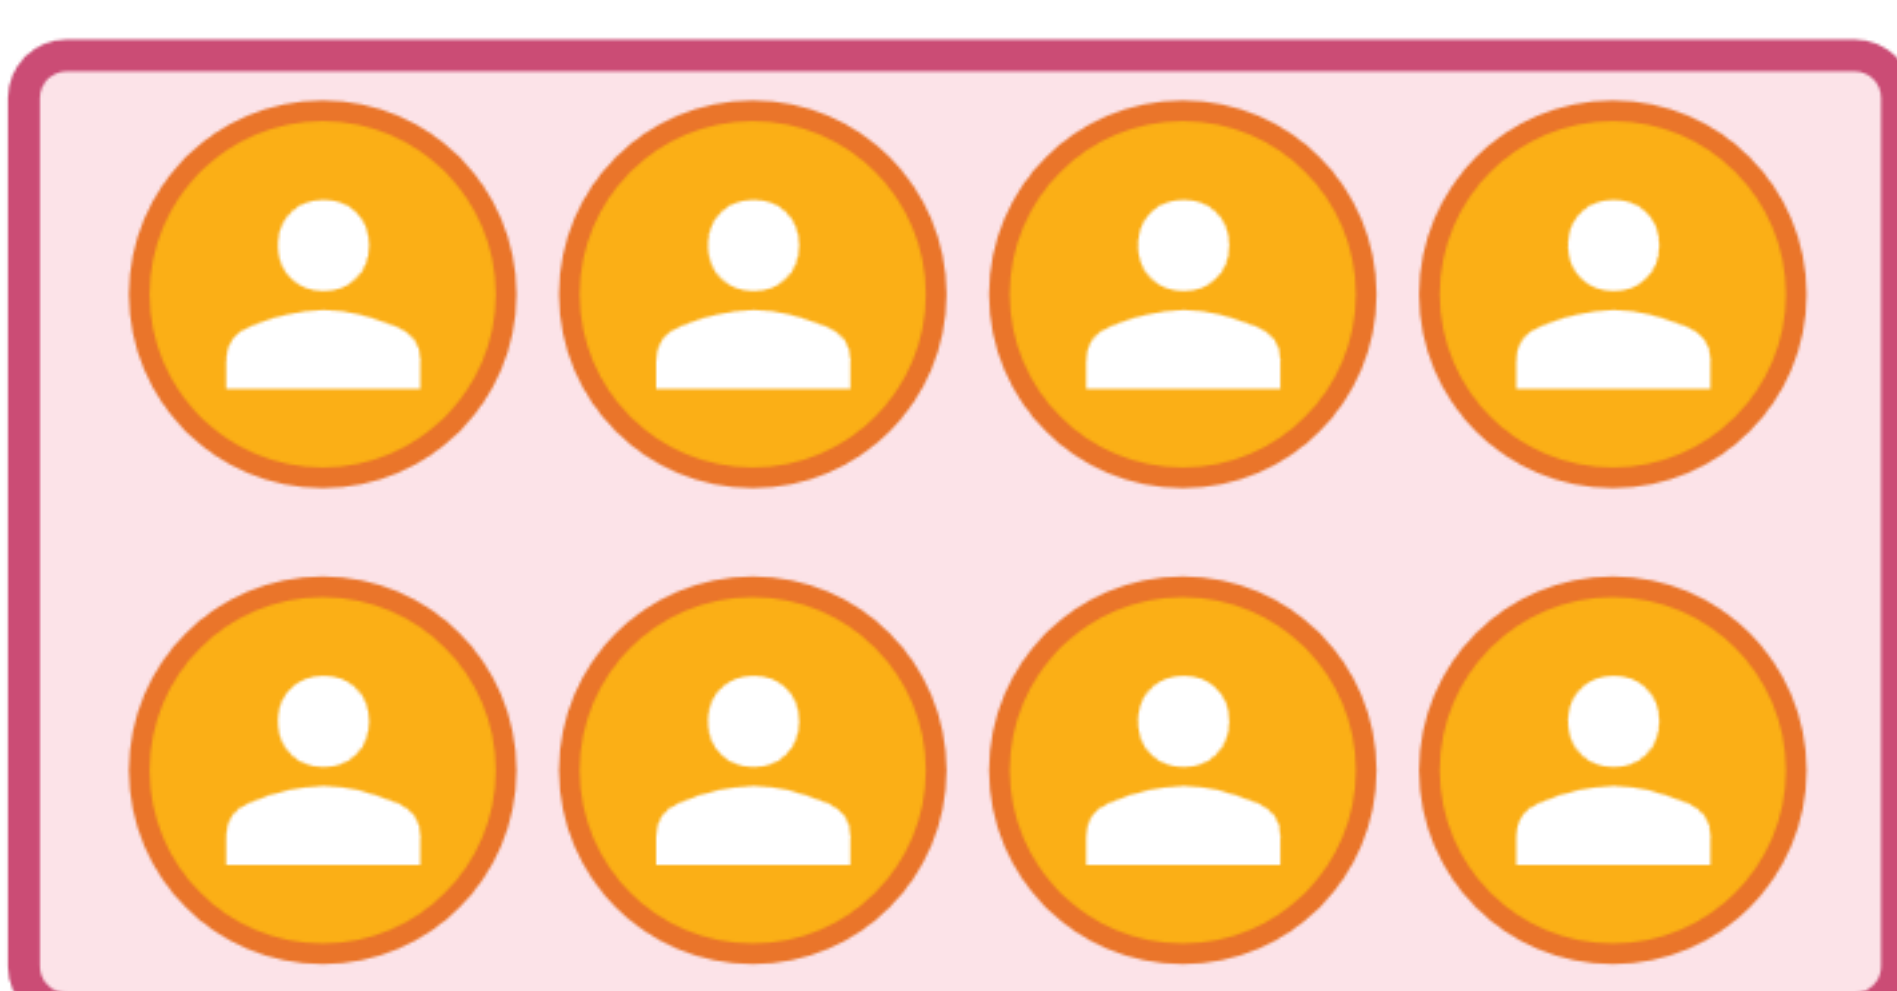

Missed people days
= 20 people x 1 day
= 20

$$\text{Absenteeism} = (20 / 100) \times 100 = 20\%$$

Planned Leaves

Unplanned Leaves

If out of 20 people, 10 are on planned leave and 10 are on unplanned absences then your unplanned absenteeism rate stands at 10%. Suppose some people come for part of the day.

How will you account for it?

It means you need to define the time that makes a working day. The time is another factor you must know as an HR expert. We will go through work time in detail.
