What are the chances that a person can safely cross a road?

The **risk** depends on the degree of the compliance with which people follow the traffic rules. The compliance depends upon the SSP (Systems, Structures and Processes). The SSP includes traffic lights, issuing driving licenses, monitoring traffic, and enforcing penalties for violations. The SSP is also referred to as **governance**.

This part is all about the risks, compliances, and governance. In this chapter we will cover the risks and compliances related to the Human Resources.
