

# Protocol of Handling Accidents

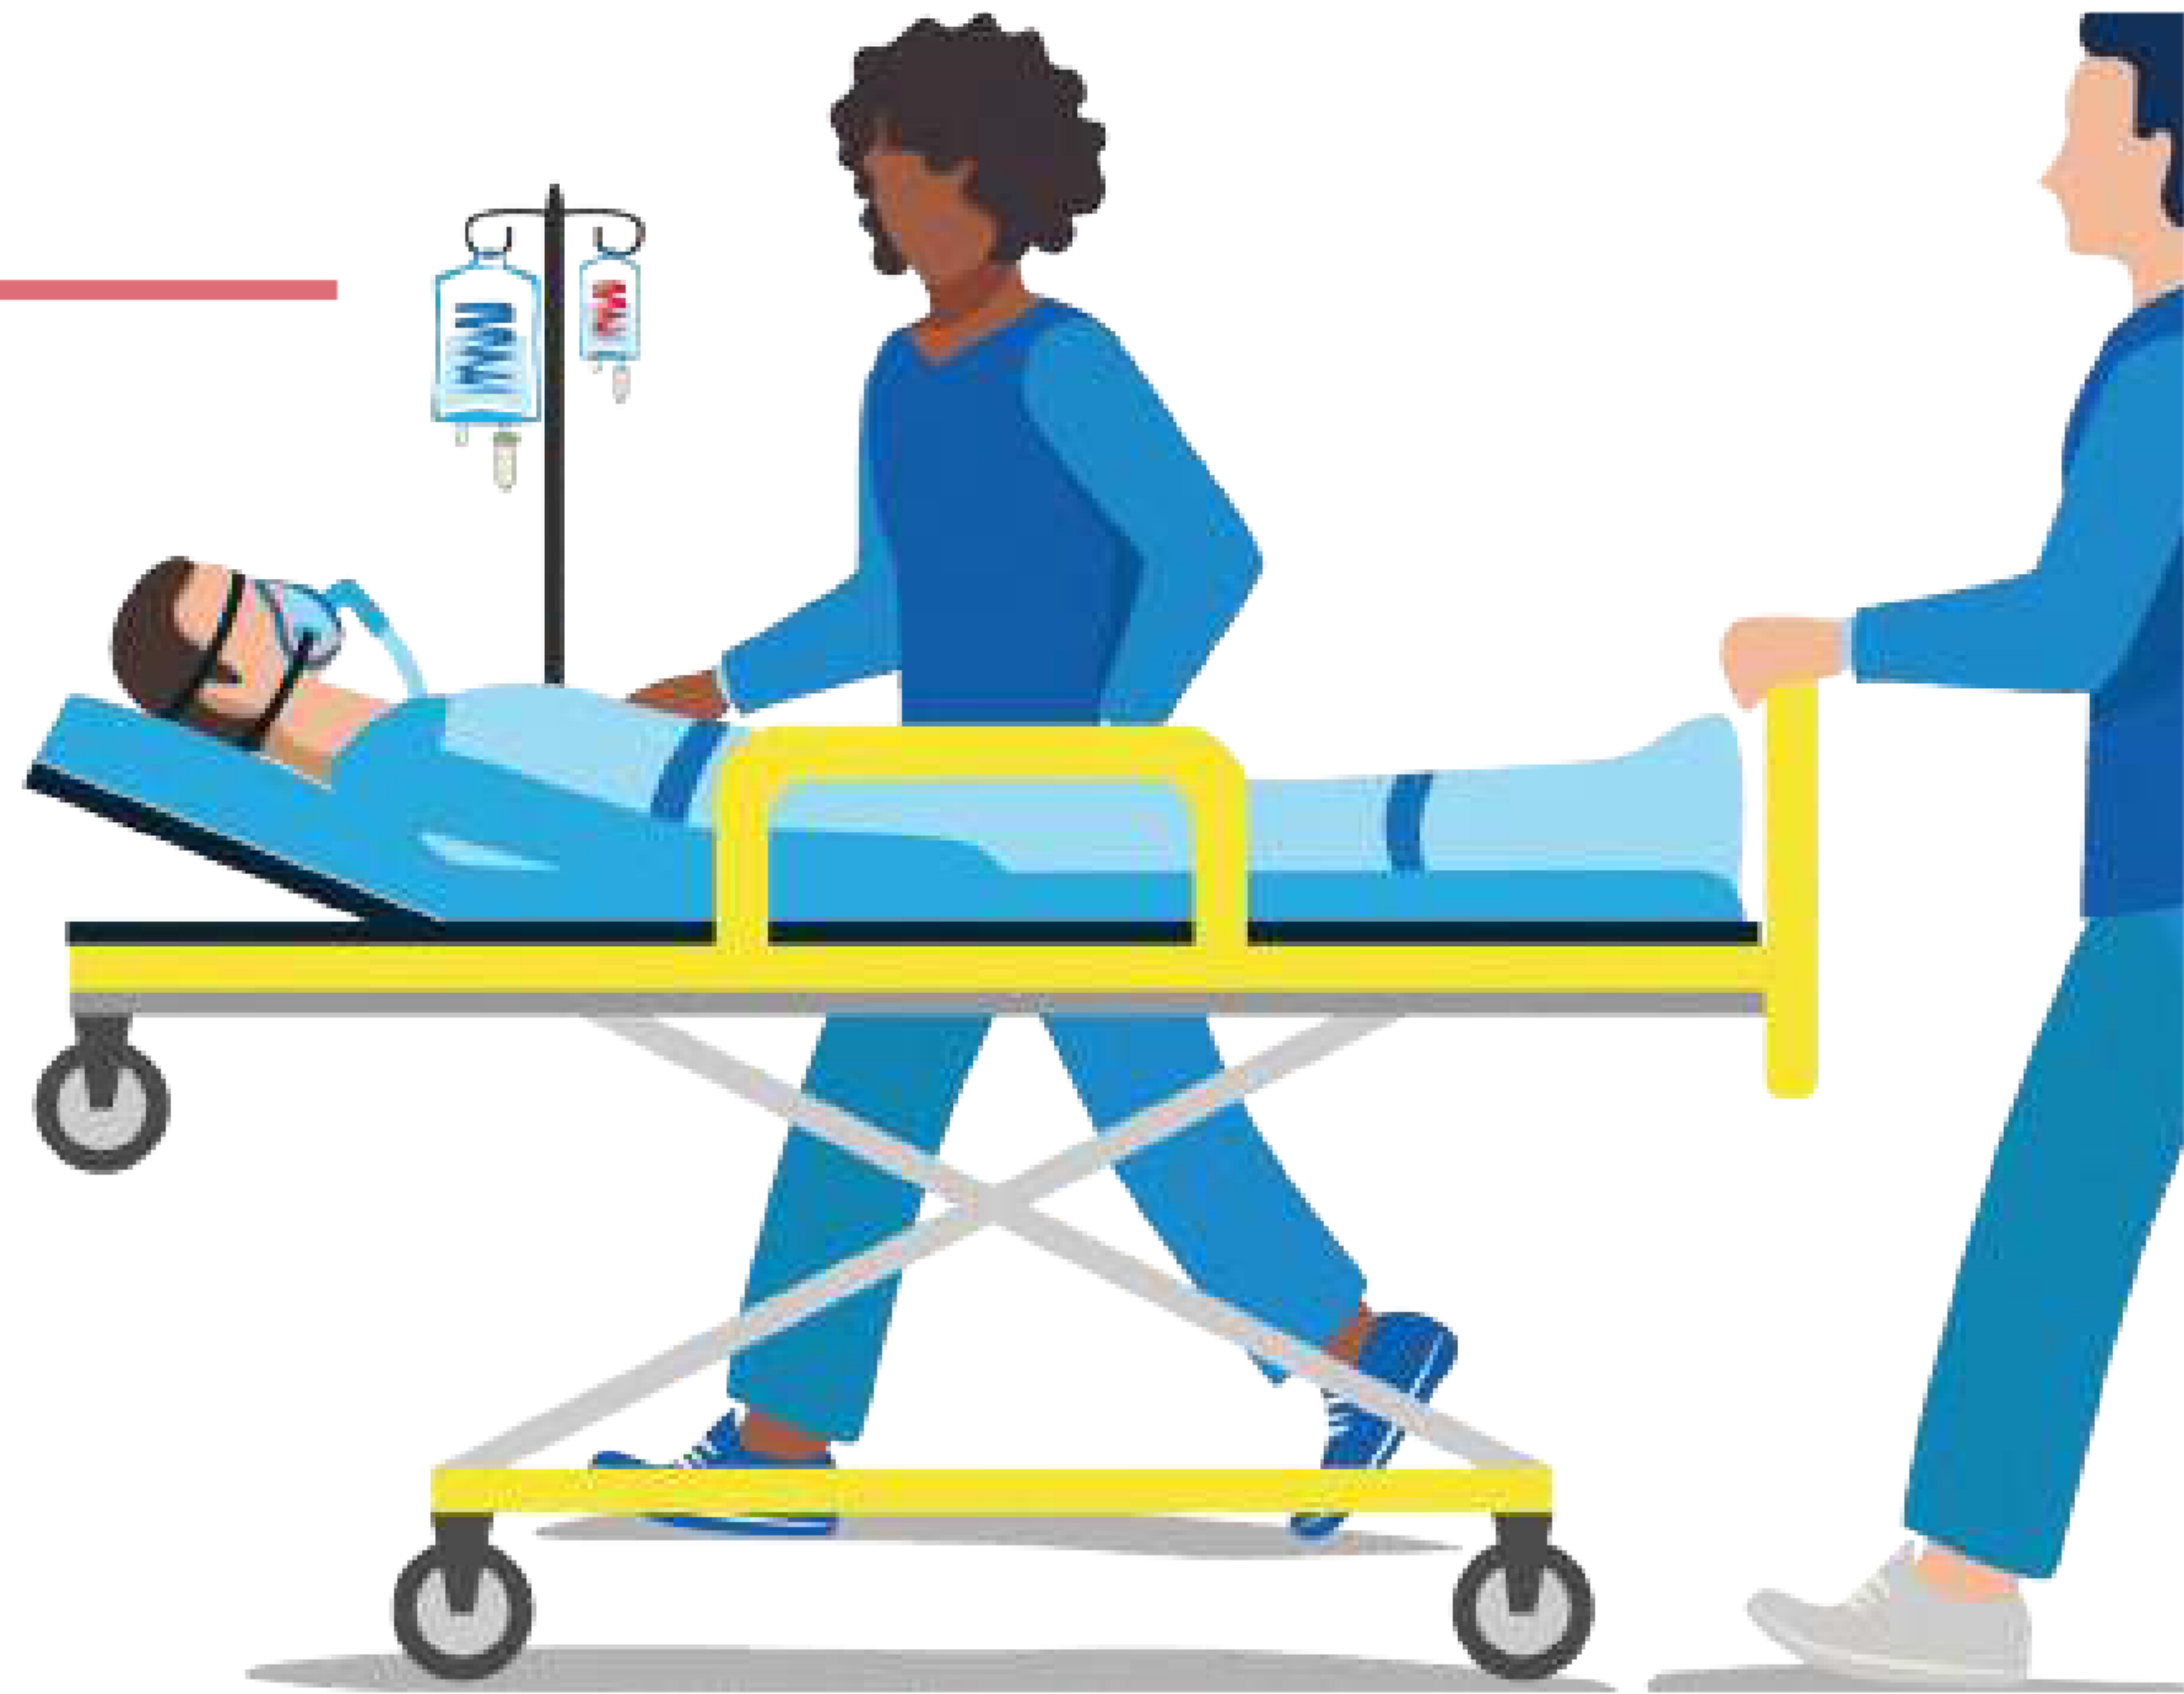

Here is the protocol for handling accidents. As soon as an accident is reported. You must follow the AID protocol.

## 1. Assist with Medical Help

Your focus should be to ensure that the employee receives medical assistance as soon as possible.

The best thing to do is to ask the person calling you to take the employee to the nearest hospital or medical center.

If that does not work, ask emergency medical services to come to the accident location. If the employee is conscious and able to receive first aid, explore the possibility of providing first aid till the time the emergency medical services arrive. This may include providing CPR and basic wound care.

## 2. Inform stakeholders

You should spread the information so that more people start working with you.
