DELTA Ecosystem

You must create an ecosystem for responding to the risks of death and accidents. The DELTA ecosystem even helps you avoid such instances. The ecosystem has 5 pillars.

1. Develop Relationships

Develop relationships with local authorities, insurance agencies, and government offices (for PF, ESI, Gratuity) to speed up the settlement process. These relationships should be developed proactively.

2. Emergency Response Team

Create an emergency response team. You may tie up with partners who provide emergency support throughout the country. You may pass on the emergency number to your employees. Then, you will not have to lose sleep, and employees will get the support relatively faster.

3. Life, Accident and Compensation Insurance

Ensure that all employees are covered by life and accident insurance. You may take compensation insurance to cover the liability for death on duty cases.
