

3. Capability evaluation of Platform

Evaluate capability of platform in context of your own organization.

Some of the important parameters for capability evaluation are

- Security - Check security and compliance capabilities.
- Support - Check response time of customer service.
- Customization - Check possibility of customization as per your unique requirements.
- Integration - Check the integration capability with your other systems.

4. Home Trial

Shortlist the partners that match your criteria. Conduct a trial with a small number of users. During home trial check

- Is the platform solving the problem it intends to solve?
- Are stakeholders happy with the experience including ease of usage and speed?
- Is the platform scalable to meet your needs in near future?

5. Make a decision to implement based on the experience of the home trial.
