HR Platform Implementation

The HR platform can be deployed in an organization using six easy steps.

1. Blueprint

Define the business requirements and prepare a blueprint for platform implementation. The blueprint defines

- Project purpose and objectives
- Project Scope
- Sponsor and team of the project
- Business requirements mapping

2. Configuration

Configure the system according to the business blueprint.

3. Testing

Test whether the system has been configured according to the requirements defined in the blueprint.

4. Data Migration

Migrate the data from the current system to the new system.

5. Training

Train the users of the HR platform. This may include the HR team, managers and employees.

6. Go live

Switch on the platform for users.
