

Predictive analytics analyzes patterns of historical data to make predictions about future outcomes, trends and behaviors. The predictions come with probabilities (Chances). For example,

Age:
24 yrs

Age:
25 yrs

The probability of attrition goes to 70% if the employee is from a different industry.

How to use Analytics?

1. Strategic Decision Making

There are two options. First option is to ask your procurement team to negotiate and bring them to 40 Lacs. Second option is to ask for data on the number of people hired through the job search engine.
