

Dashboard

The concept of dashboard comes from the dashboard of the car where you can visually monitor the key metrics for driving in real time.

The characteristics of the dashboard are:

- 1. It shows metrics and data points in a single screen.**
- 2. It is real-time.**
- 3. It flags potential issues as they arise.**
- 4. It has interactive filters so that you can drill down to the specific data points. This is an advanced feature. You don't find the feature on your vehicle dashboard.**
- 5. It is easy to understand and interpret as it uses data visualization techniques.**
