Disciplines of AI

There are multiple disciplines of AI. Here are the key areas where advancements are happening in the AI field.

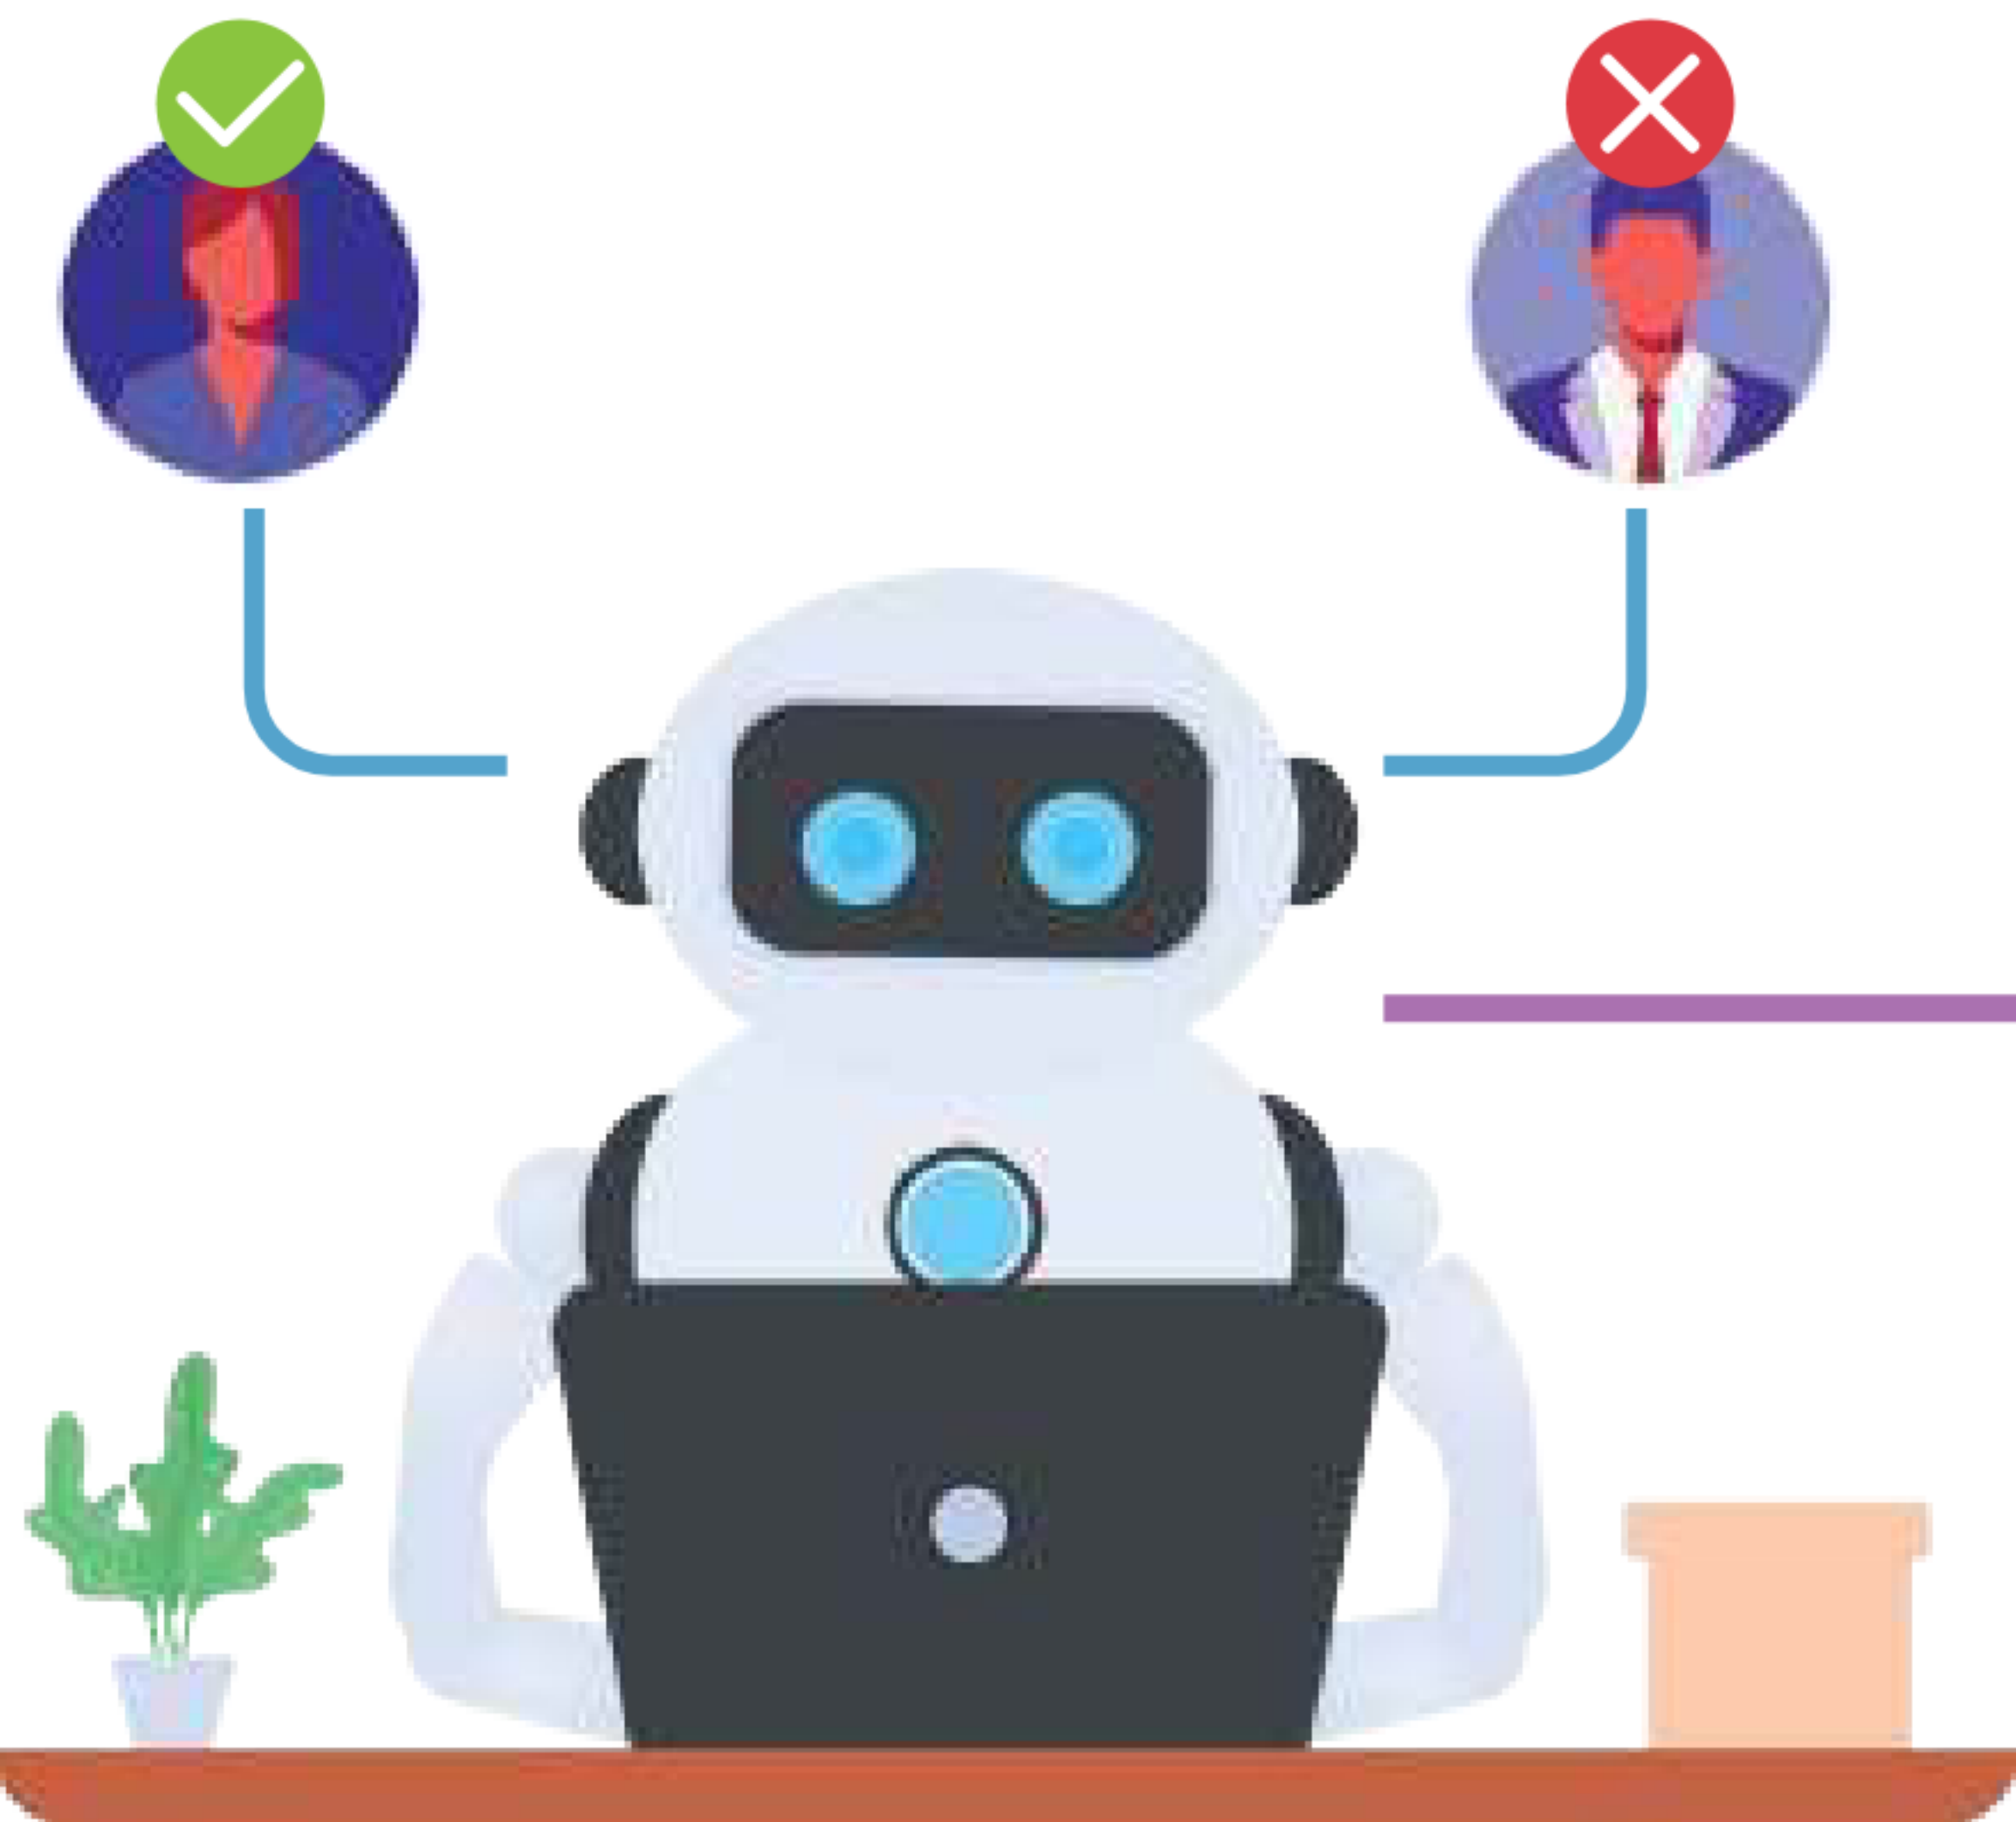

Discipline	The focus is to	Uses(Examples)
Machine Learning	Learn from structured data with human guidance	Speech recognition and predictive analysis
Deep Learning	Learn from unstructured data without human intervention	Self driving cars
Natural Language Processing (NLP)	Understand, interpret and generate human languages	Virtual assistance like Siri and Alexa
Computer Vision	Interpret and understand visual information	Facial recognition, Video analysis
Expert Systems	Mimic human abilities in a particular field	Medical diagnosis by IBM Watson

Since each discipline replicates an ability. The examples may use multiple abilities to deliver a service like IBM Watson uses NLP, Computer vision, and machine learning algorithms. You must be thinking whether there is any use of AI in HR.

AI application in HR

There are more than 50 use cases where AI is used in HR. You should know the key applications of AI in HR. These are not futuristic. They are currently happening.

1. Recruitment

- a. **Creating Ideal profiles** - Study CVs of performing employees for a role and recommend the ideal profiles for hiring.
- b. **Autofill employee profile** - Read CVs and autofill profiles in the ATS.
- c. **CV screening** - Screen and rank CVs based on the ideal profiles.
- d. **Interview screening** - Conduct an initial interview to screen candidates.
