

3. Calculate the Salary increase

Calculate the salary increase for following employees applying Compa Ratio. The median salary for the job is INR 10,000. The increment for rating A is 10% and rating B is 5%.

Parameter	Amar	Raj	Ravi
Current Salary (INR) (A)	8,000	10,000	12,000
Performance Rating	A	A	B
Salary Increment	10%		
Salary Increase (INR) (B)	800		
Compa Ratio (CR)	$(8000/10000) = 80\%$		
Net Salary Increase (D = B/C)	$(800/80\%) = 1000$		
Final Salary (INR) (E = A+D)	$8000 + 1000 = 9000$
