

How to design Onboarding?

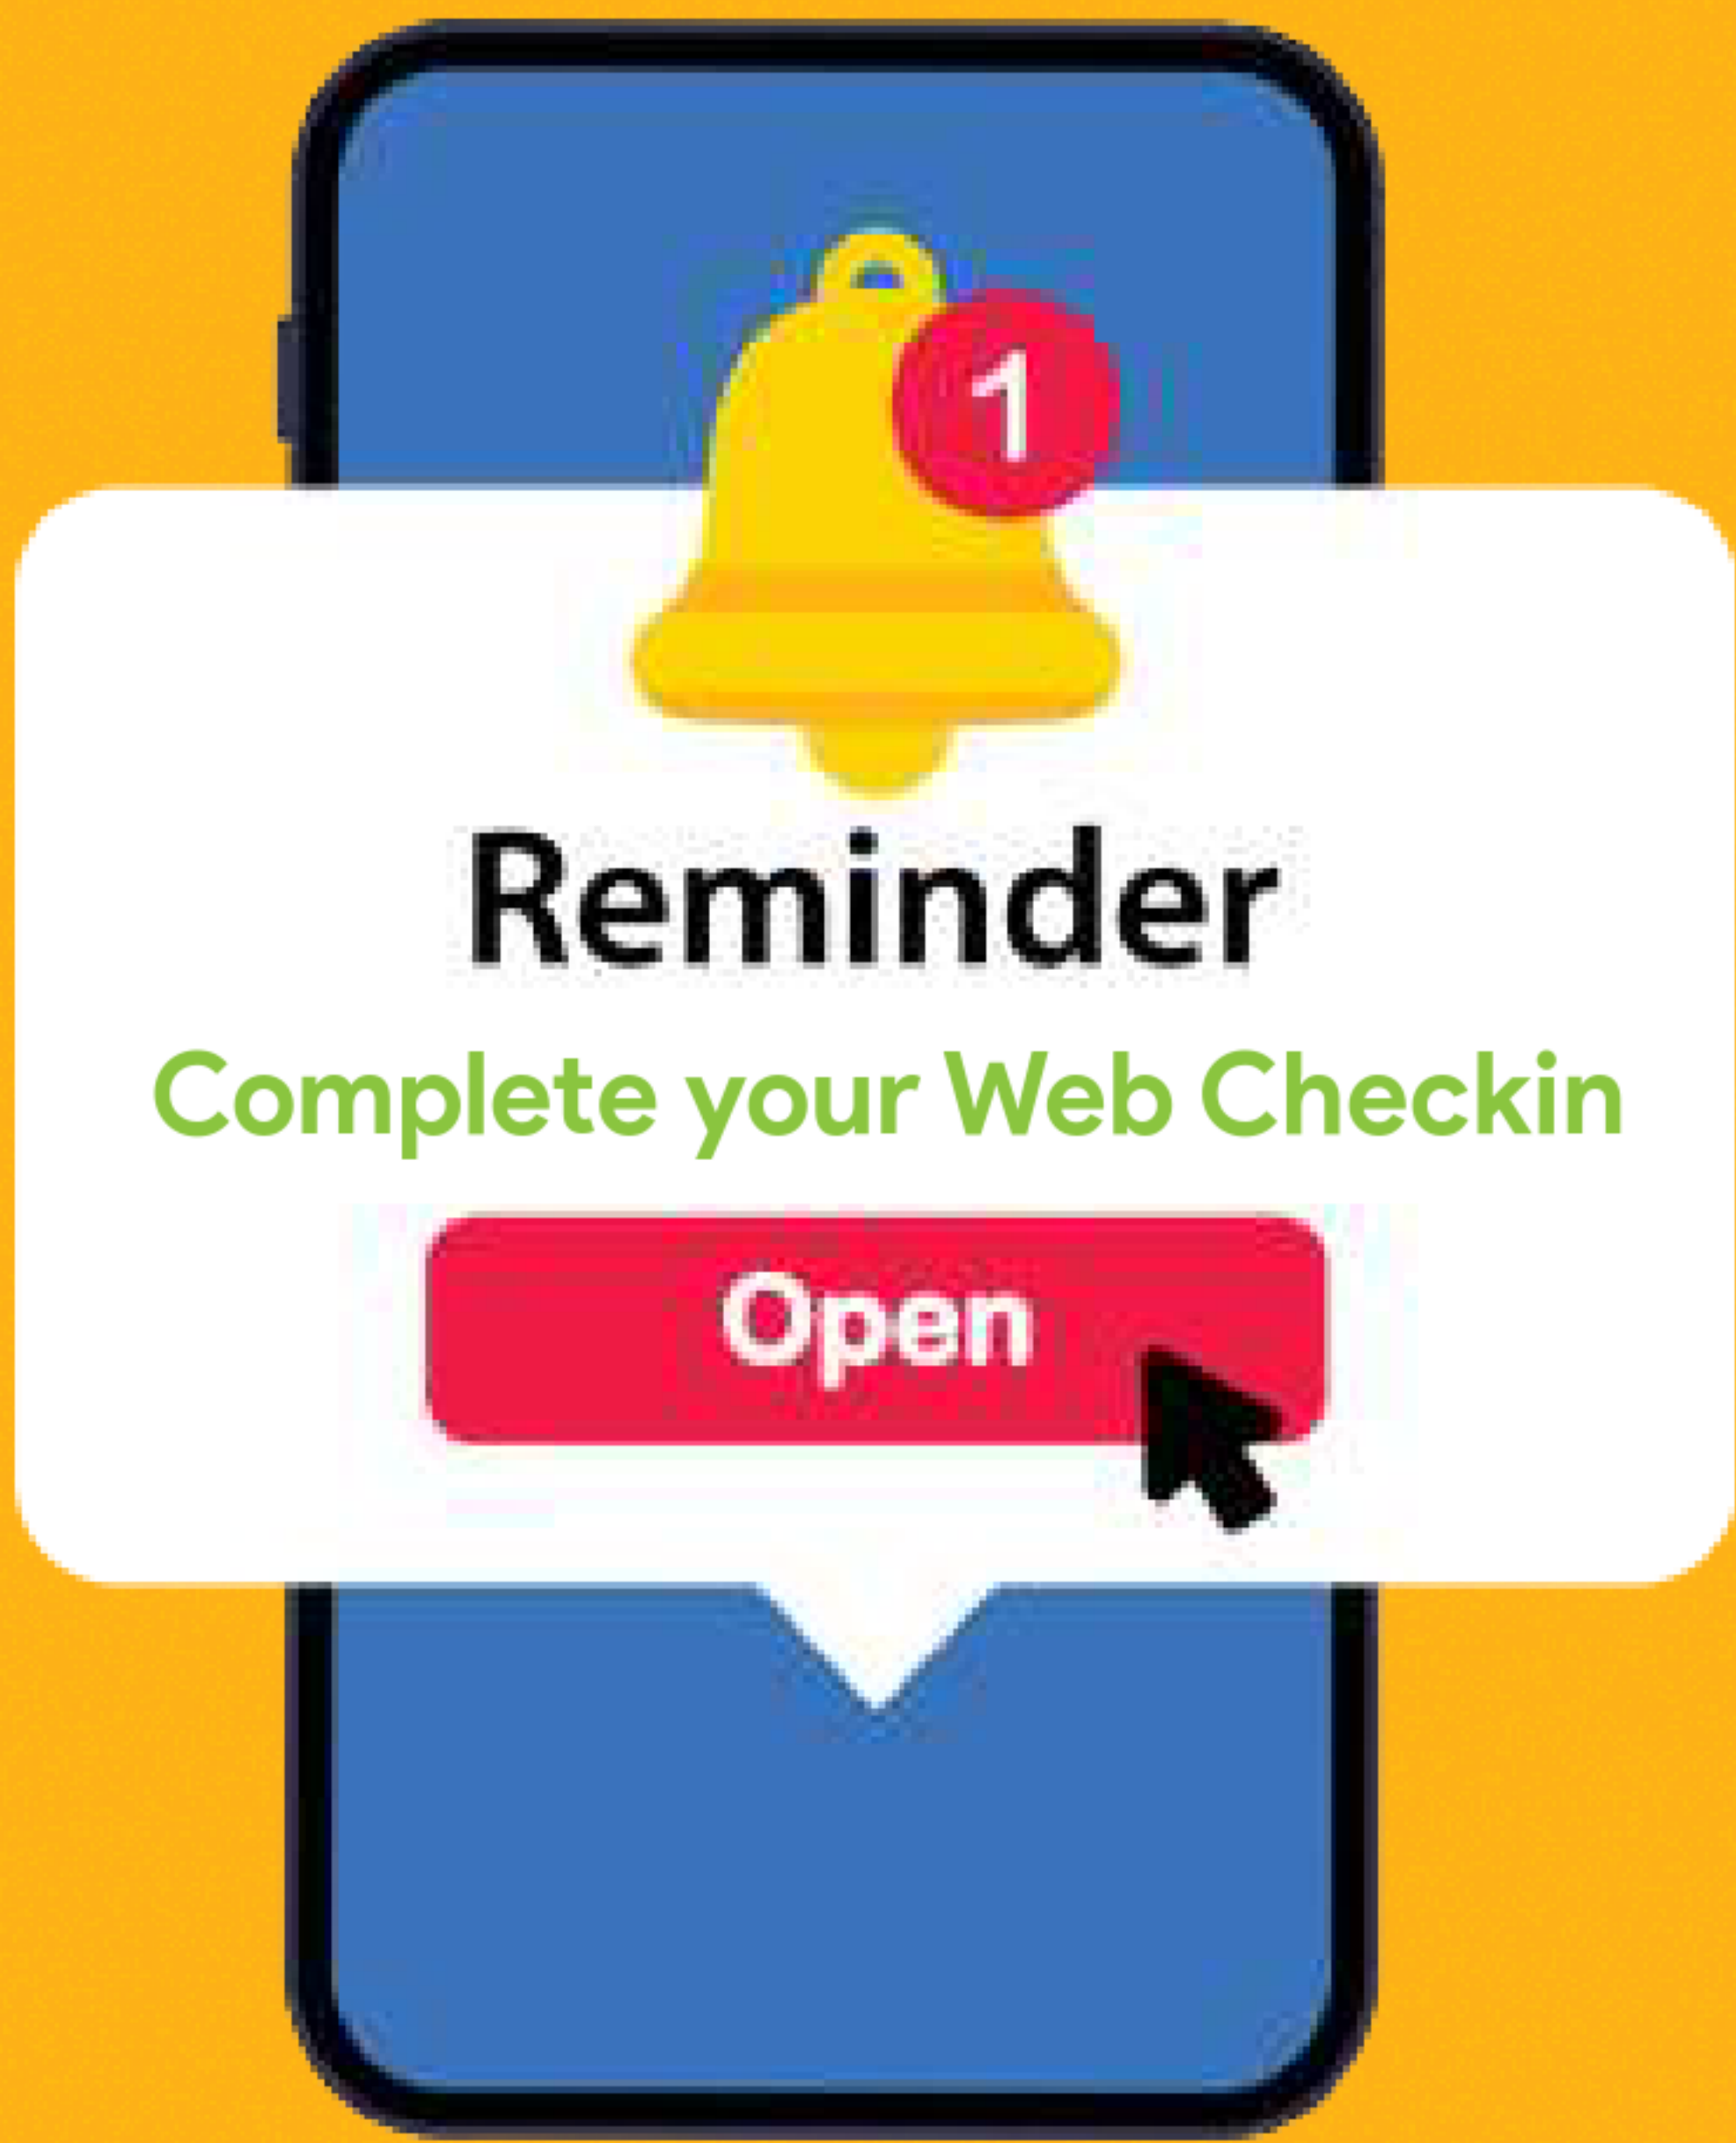

You can use the POISE methodology to define the onboarding experience for your organization. The methodology defines that onboarding is not just an event.

It starts when a candidate accepts the offer letter and continues till the time the employee becomes integrated with the organization. It happens in five distinct stages.

1. Pre-boarding

This is comparable to sending messages to encourage advance web check-in and notifying prospective travelers about any potential delays. This process starts after a traveler buys the ticket.

In a similar manner, preboarding starts after a candidate accepts the offer letter.
