

Omnichannel

Omnichannel distribution is an approach that combines both direct and indirect channels to reach customers. Companies using an omnichannel strategy ensure they have a consistent experience across all channels, whether it's through physical stores, self-built apps, third-party platforms, or any other.

For example, H&M and Lenskart offer their products through their retail outlets, websites and third-party apps like Myntra. Hence, customers can choose the shopping method at their convenience.

Multiple Shopping Experience for Customer Experience
