B. Wholesaling and Bulk Distribution

Businesses sell products in bulk quantities to wholesalers, who then distribute them to customers or other businesses.

Let's look at some common examples of this distribution strategy.

Food and Beverage Wholesaler: **Sysco** is a food service distributor that supplies restaurants, hotels, and healthcare facilities with a wide range of food and beverage products in bulk.

Construction Materials Supplier: **Home Depot Pro** supplies construction materials such as lumber, plumbing fixtures, and electrical components in bulk to contractors and builders for commercial projects.

Business to Business to Consumers (B2B2C)

In the Business-to-Business-to-Consumer (B2B2C) model, businesses sell their products or services to other businesses (B2B), who then sell them to consumers (B2C).

This involves B2B and B2C transactions, introducing an intermediary business (B2), (B1), and the end consumer (C). Unlike traditional B2C transactions, where the business sells directly to consumers, B2B2C involves two levels of transactions: B2 to B1 to C. In this model, the intermediary business may have the right to add their margins to the products and sell them under their brand name, based on agreed terms.
