

When you have an idea that addresses a problem but people haven't recognised it before, it means the market is not fit for the idea. In this situation, you need to learn through research and feedback from users. Then, you'll need to educate people about the problem and how your product solves it because the people are not familiar with the solution.

When an idea that addresses a problem or gives innovative solutions like a new game or VR experience - you need to learn by doing thorough research and collect user feedback. Next, you'll need to educate people about the problem, the innovative solution, or the new opportunity your product creates helping them understand how it addresses customers' their needs.
