

Encouraging Feedback Across Channels

To make feedback collection seamless, businesses should integrate it into different stages of the customer journey.

After Purchase & Delivery

Ask customers to share their feedback after they receive and start using the product for the first time. Some companies offer discounts or other perks through small cards included with the product for customers to share reviews. However, to receive the discount, customers leave positive reviews regardless of their true feelings about the product. Hence this question about credibility. There should be a balance between incentivising them to maintain their authenticity and credibility.

For example, Amazon India includes feedback requests in their packaging and offers discounts or vouchers for leaving reviews. However, they have strict guidelines against incentivising positive reviews and encourage customers to share their honest opinions.

Online Platforms & E-commerce Reviews

Make sure that reviews are open and accessible on your online platforms, including e-commerce sites and your own website. Consider building customer retention to address queries and concerns. It helps to understand subjective aspects of customer experiences.

For example, **Urban Company** prioritises accessible reviews on its platforms, offers responsive support for customer retention, and gathers feedback to understand experiences, ensuring quality service and trust among users.
