

Startupology

Thus, businesses can explore new value propositions for customer segments, utilise new channels for product or service delivery, or develop new customer relationships by diversifying key resources, activities, or partnerships. Businesses mitigate the risk of concentrating on a single source of income and thus enhance their financial stability.

Let's look at the examples of Apple and Amazon.

Apple is an example of successful revenue diversification through innovation and adaptation. Initially, Apple was only known for being a computer manufacturer, but they expanded their products and services over the years, resulting in a diverse portfolio. This fueled the company's ability to innovate and create new value propositions designed for customer segments.

iPhone leveraged Apple's key resources, such as technology and brand recognition, to create a revolutionary product in the mobile phone industry. This added significantly to the revenue stream and built a position in the tech market. Inspired by the success of the iPhone, Apple continued to innovate products like **iPad, the App Store, Apple Music, and iCloud, diversifying its revenue stream.**
