

2. Problem Driven Ideas

Here, the main focus lies on solving the problems and addressing the gaps that are unmet needs. Several factors need to be considered.

➤ Understanding the User's Pain Points

Start by researching actual problems, getting close to users, and observing their experiences. Understanding their struggles will help develop targeted solutions that lead to better adoption and success.

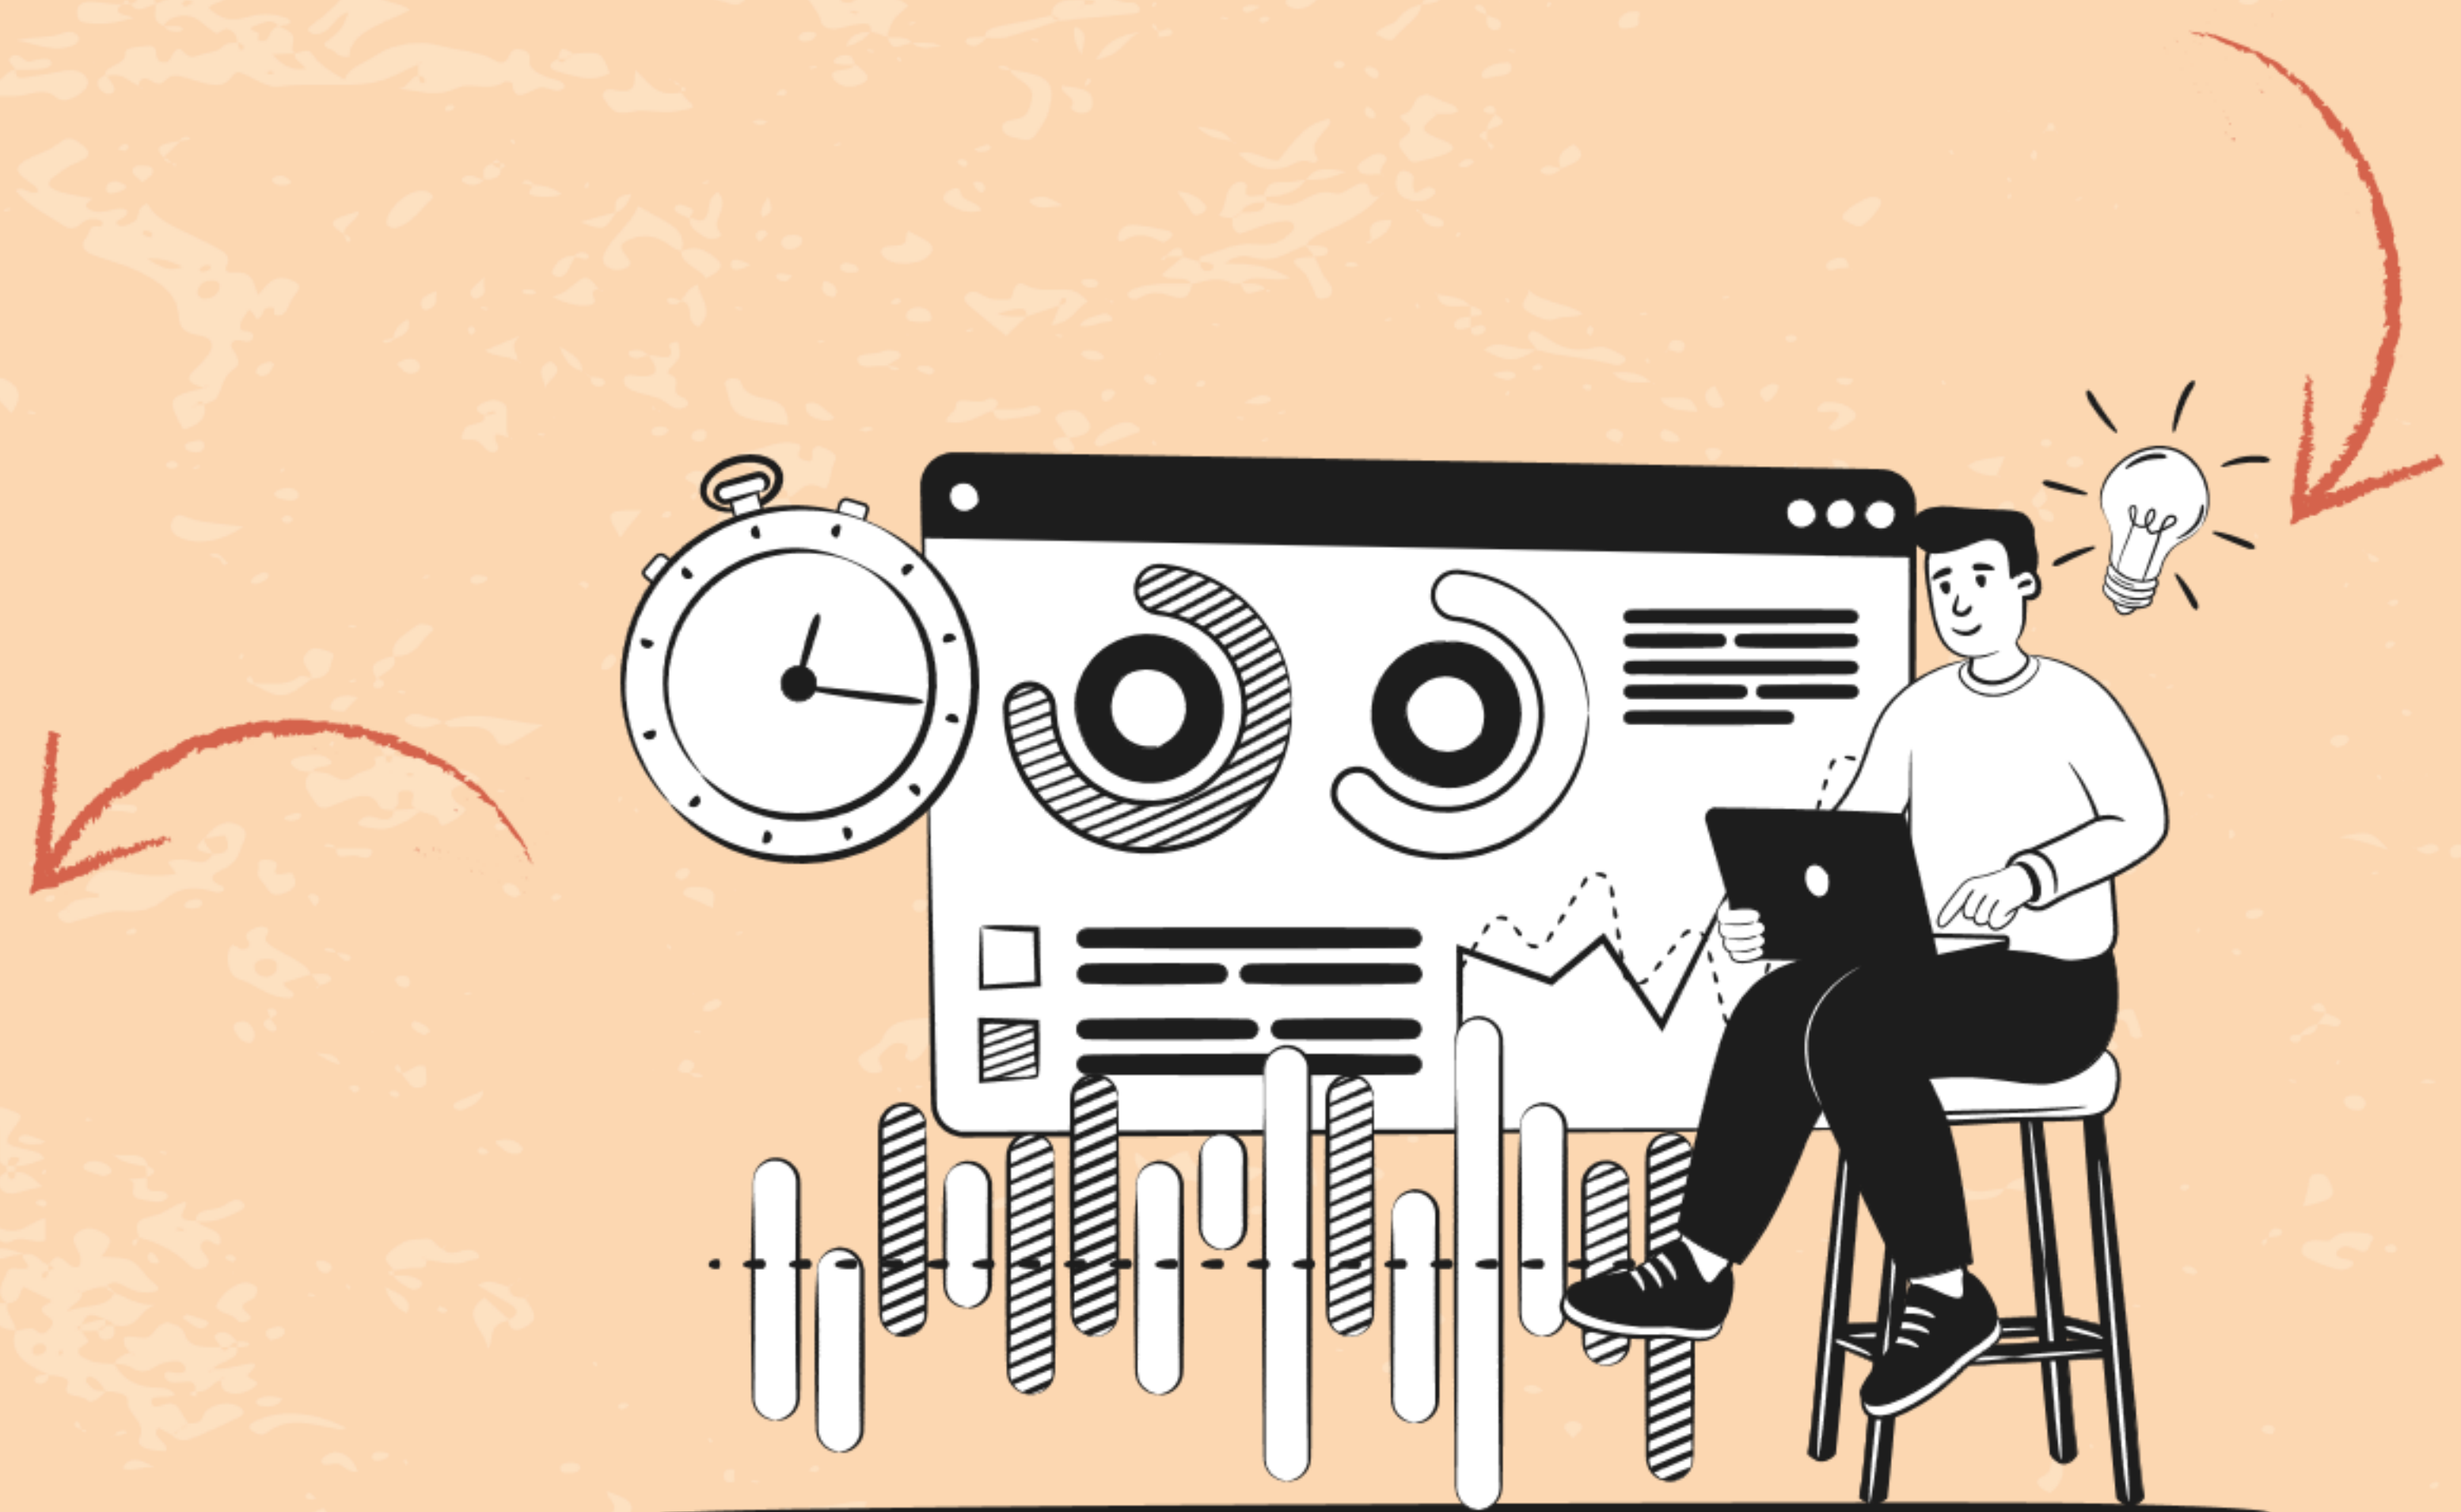

First, identify the real and actual problems that exist, study them closely.

Empathise with target audience, see what they are facing.

This leads to more meaningful and successful outcomes.

Then develop solutions that meet the needs of the audience.

For instance, if users find your application too complex, redesigning the interface for better usability can significantly improve engagement
