Externalisation

3. Externalisation

Externalisation is like translating tacit knowledge into explicit knowledge. Externalisation happens when employees take their expertise or experiences and turn them into something tangible, like documents, presentations, or diagrams. For example, if you have a solution to a problem, you might write a report detailing how it works, create a presentation to share with your team or draw diagrams to illustrate your ideas.

Combination

Explicit

Explicit

4. Combination

Combination refers to the process of gathering explicit knowledge—information that can be easily expressed and communicated—from various sources and refining and organising it to create a new body of knowledge. Then, this new information is shared with others. So, the combination is essentially about taking explicit knowledge, mixing it up, and creating something new and valuable.
