

2. Developing Resilient Strategies Through Past Learnings

To build resilience, startups must analyze past challenges, identifying root causes and recurring patterns to anticipate future risks.

Armed with these insights, they can develop proactive strategies such as contingency plans, early warning systems, and safeguards to minimize potential disruptions.

By applying these learnings, startups can address weaknesses, implement targeted solutions, and navigate uncertainty more effectively—turning past mistakes into a foundation for long-term success.

What are the potential risks or threats to our startup?

Identifying potential risks or threats to your startup involves recognizing factors that could negatively impact various aspects of your business operations, such as production, supply chain disruptions, or technology failures; financial risks, such as cash flow problems, unexpected expenses, or insufficient funding to support growth plans; and reputation risks, including compliance and ethical issues.

Possible Risks:

- Production
- Supply chain disruptions
- Technology failures
- Financial risks
- Insufficient funding
- Reputation risks
