

3. Growth Framework

Business Model

Zomato’s business model is a prime example of innovation in the food technology industry. As an international restaurant aggregator and food delivery company, Zomato has revolutionised how people discover restaurants and order food. Zomato has established itself as a leader in the field, reshaping the way people interact with food services.

Multiple Revenue Streams

Zomato generates revenue from various sources, including several prominent ones, such as:

Advertising Revenue

A significant portion of Zomato’s income comes from restaurants and food-related businesses that pay to advertise their services on the platform. This allows businesses to increase visibility and attract more customers.

Commission-Based Model

Zomato charges restaurants a commission for listing on its platform and processing customer orders. Each transaction earns Zomato a percentage of the total order value, making it a key revenue driver.

Membership Program

Zomato continually enhances its offerings through innovation and experimentation. Its Pro Membership Program (formerly Zomato Gold) provides exclusive privileges such as discounts, complimentary dishes, and priority services, strengthening customer loyalty and engagement.
