

PREFACE

When I started my first company, I thought a great idea and hard work were enough. I was wrong. In my first startup, I spent months perfecting a platform, convinced that customers would come. They didn't. I had to rethink everything—experimenting with different approaches, adjusting to what the market needed, and making tough decisions. Over time, those changes paid off, and the startup was eventually acquired.

Over the years, I've built and sold companies, mentored founders, and helped startups grow. I've seen what works, what fails, and what wastes time. Startupology is my way of sharing those lessons with you.

This book isn't about theory. It's practical, straight to the point, and based on real experiences. You'll learn how to test ideas, get customers, sell better, and make smart decisions without wasting time or money.

Mistakes are inevitable, but what matters is how fast you learn and adapt. If this book helps you navigate challenges, make better decisions, and build something great, then it has done its job.

The startup journey is tough, but you don't have to do it alone. Let's build something great together.
