

➤ Secondary Research

Secondary research involves gathering information from existing sources rather than directly from end-users. Here are two common methods:

Online Database

Online Databases: Utilise online sources such as academic journals, industry reports, and government databases to gather relevant information related to your product or market.

Market & Competitor Analysis

Market and Competitor Analysis: Study existing products in the market and analyse competitors to identify gaps or areas where your product can offer unique value. This helps you understand the competitive landscape and make informed decisions.

Differentiation Strategy

When using the VPC to identify a competitive advantage or differentiation strategy, businesses can focus on several key areas.
