

1. Production/Solution Cost

Analyze how much it costs to make your products or services. Try to find ideas and implement them where you can give great experience while reducing costs, still making enough profit margins, and continuing to grow.

2. Market Demand

Your product or service should be valuable, widely used, and consistently needed. Higher demand leads to more revenue and growth opportunities, making your business scalable and profitable.

Key Insight: Reducing costs while increasing demand improves profitability and ensures long-term business sustainability.

The cost of providing or implementing your solution, whether locally and globally, should be minimized to maximise profitability.
