

Here's a Development cycle for building your MVP:

Define the Development Timeline: Keep it short (ideally a few weeks) to accelerate market entry. Early iterations will refine the product based on user feedback.

Engage Stakeholders: Conduct team meetings to identify gaps, brainstorm improvements, and enhance the MVP collaboratively.

Work on Identifying Clear Measurement of Success: Evaluate key metrics like user engagement, retention rate, conversion rate, customer satisfaction, and many more to determine the success rate of the MVP.

Set a Launch Date: First, decide when you want to launch your MVP. This gives you a clear timeline to work towards.

Thoroughly Test your MVP: Before launching, make sure your MVP is tested thoroughly. Ensure the product meets all the needs that customers are facing.

Build a Consensus Internally and Finalize the MVP: Work together to reach a consensus on the final version of the MVP. Improve and make any necessary adjustments based on feedback, and make sure everyone is on board with the decisions.

Launch the MVP: Finally, launch the MVP to your potential target customers, and then monitor your product performance.
