

Here is the same with numbers:

Money your family will need....	Money you have today....
 Living Expenses Fund $(1 \text{ lakh} \times 12) / 18\%$ $= 3 \text{ Crores}$	 Savings + FDs $5 \text{ Lakhs} + 5 \text{ lakhs}$ $= 10 \text{ Lakhs}$
 Major Expenses Fund $20 \text{ Lakhs} + 50 \text{ Lakhs} + 50 \text{ Lakhs}$ $= 1.2 \text{ Crores}$	 Mutual Funds $= 50 \text{ Lakhs}$
 Major Liabilities Fund $75 \text{ Lakhs} + 5 \text{ Lakhs} + 5 \text{ lakhs}$ $= 80 \text{ Lakhs}$	 Gold, House, Silver $= 50 \text{ Lakhs}$
Total funds required 5 Crores	Total existing Funds 1.15 Crores

The gap between what you already have and what your family will need to maintain their current lifestyle and afford major expenses is the amount of life insurance you should take which is 3.85 Cr in our case.
