

₹ 100

75% Gold component

25% Making charges

This is because the making charges associated with jewellery can be as high as 25%. So, say you are buying ₹100 worth of gold in jewellery form.

The gold component is only ₹75, and the remaining ₹ 25 are the making charges. So you'll only generate real return on that jewellery after it has appreciated its value by 25%. In addition to that, jewellery also has storage costs.

From an investment perspective, if your goal is to invest in gold as part of your strategy, you might want to consider other forms of investing in gold, such as:

Gold Coins/Bars

Gold ETFs

Digital Gold

Sovereign Gold Bonds (SGBs)
