

understand how customers' perceptions motivated their behavior. He pioneered the process of eye tracking to determine how people read packaging and advertising. While Dichter relied primarily on Freudian psychology to explain buying behavior, Cheskin's work was based more on logic. For example, while both men worked in cigarette advertising, Dichter claimed that women smoked more when ads depicted "erect" cigarettes in the hands and mouths of other women because of their "penis envy," while Cheskin concluded that women smoked more when they saw other women smoking—a sort of peer influence. Parker reminds the reader of his book that while Cheskin is remembered for many successes, including the Marlboro Man and the Gerber baby, Dichter was widely recognized for telling the management of Mattel to make Barbie's chest bigger, reflecting his Freudian background.

According to James P. Othmer's book *AdLand*, one of the earliest advertising executives to use motivational research in designing advertisements was Leo Burnett. Burnett started his own agency in 1935. His first client was the Minnesota Valley Canning Company with the Jolly Green Giant campaign. When it came to television ads, however, the Jolly Green Giant didn't work so well. The company settled on using him as a giant standing in a valley, giving his trademark laugh. In 1968, Leo Burnett came up with a new campaign, one with a little green sprout who ran around the valley getting into all sorts of trouble and charming the television viewers. Burnett went on to create some of the most memorable brand characters in advertising history, including Morris the Cat, Charlie Tuna, Tony the Tiger, and the Pillsbury Doughboy. He was at the forefront
