

much opportunity remains. Clearly, it's still early days for bitcoin, and even earlier days for its digital siblings.

If the preceding log graphs all looked relatively similar, that's because they were. Bitcoin's ascent dwarfed that of other assets, and that's on a log scale y-axis. If the y-axis is linear instead, then all the previous graphs condense into [Figure 7.5](#), with Netflix as the only name that moderately differentiates from the rest. We also added assets outside of U.S. equities, including U.S. bonds, U.S. real estate, gold, and oil.⁷ Gold and oil investors received a doubly short end of the stick, as by January 3, 2017, they had lost 30 percent and 40 percent of their value, respectively. All other assets provided positive returns since Facebook's IPO.
