

shown particular strength, and overall fiat currencies have increased from less than 10 percent of ether's trading volume in the spring of 2016 to nearly 50 percent in the spring of 2017.

We encourage the innovative investor to monitor the increase of trading pair diversity as a way to check the growing robustness and maturity of a single cryptoasset within the broader asset class. [CryptoCompare.com](https://cryptocompare.com) is a good tool to identify these trends.

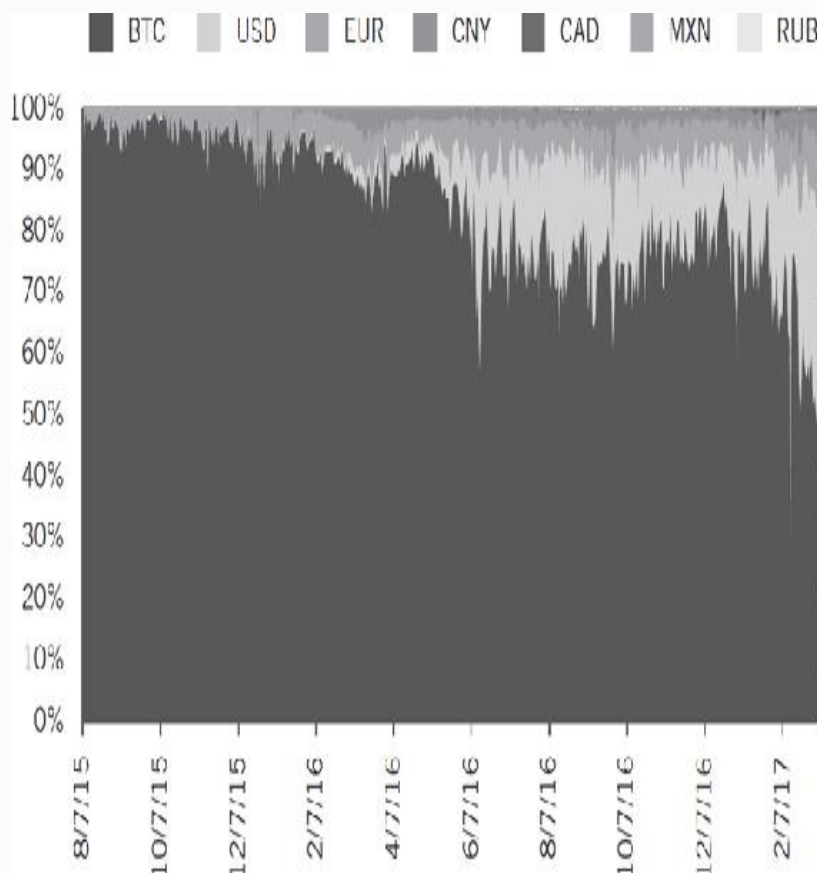

Figure 9.5 ■ Ether's increase in trading pair diversity and the use of fiat onramps
