

released the software with different functionality. Subscribers refer to people wanting to stay actively involved with the code. In short, the more code repository points, the more developer activity has occurred around the cryptoasset's code.

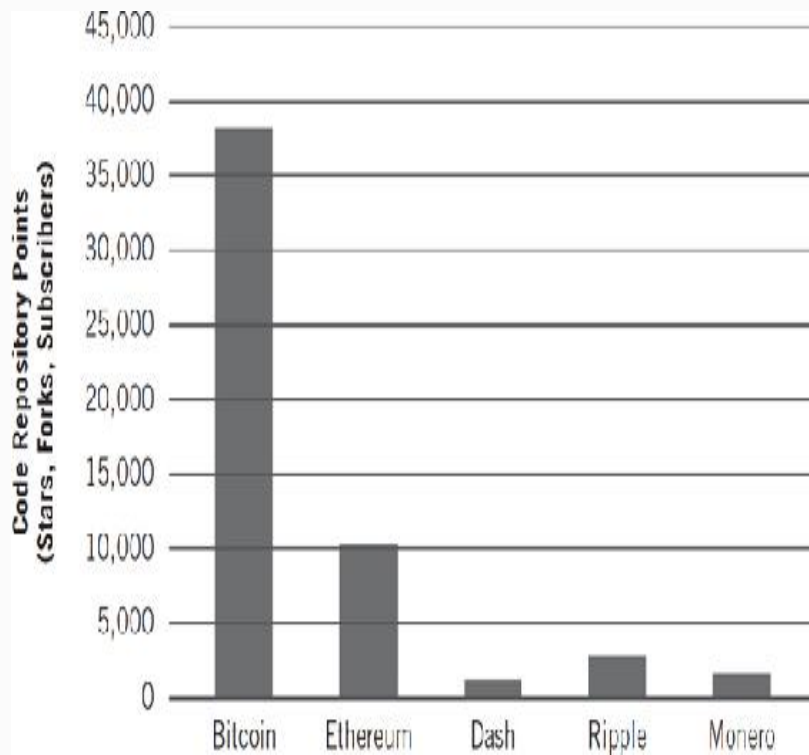

Figure 13.9 ■ Code repository points for different cryptoassets (March 29, 2017)
Data sourced from CryptoCompare

However, what's unfair about this metric is that bitcoin has been around for over eight years, while other cryptoassets have been around for a fraction of that time. Standardizing for the amount of time the cryptoassets have been under construction yields the graph in Figure 13.10.¹⁴
