

other wallet providers exist. For example, as of March 2017, Coinbase had 14.2 million wallets, on par with Blockchain.info. Second, an individual can have more than one wallet, so some of these numbers could be due to users creating many wallets, a flaw which extends to other wallet providers and their metrics as well.

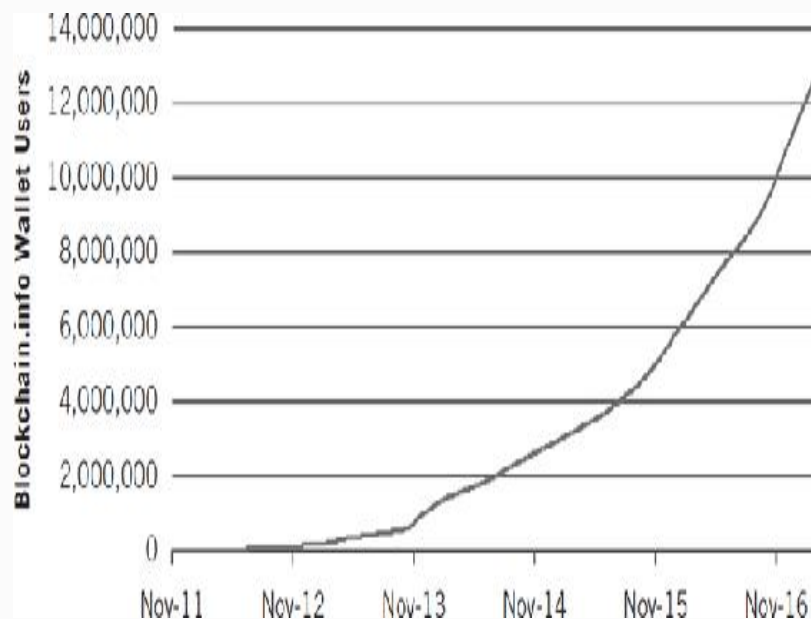

Figure 13.15 ■ Blockchain.info wallet users over time
Data sourced from Blockchain.info

Willy Woo, a [Coindesk.com](https://coindesk.com) contributor, utilized Google Trends to evaluate the searches done on Google for the term “BTC USD.” He wanted to do this as “an effective proxy for the growth and engagement of bitcoin over time.”²⁰ In other words, he wanted to use this metric to determine the growth of bitcoin users. [Figure 13.16](#) shows the trend of this search term over time. Woo indicates that the peaks “are in line with price bubbles, periods where more users head online to check the value of their wealth.” Woo makes the leap that an active
